Praim 4 ECOLOGY

How to help save the planet (and some money) with Praim thin clients

Power consumption reduction

On average, thin clients consume 85% less electricity than PCs, reducing total cost of ownership and pollution. (*)

Cost reduction

Being completely solid-state thin cients will last longer than PCs, reducing replacement frequency and the amount of waste produced.

Components reduction

All-in-One thin clients already have everything you need, you don't have to buy other components to start working.

Resources reduction

Being smaller than PCs, thin clients require less bulky packaging and predominantly use recycled materials.

Emissions reduction

By design, thin clients generate and radiate less heat so require less cooling. This also reduces the amount of air conditioning required to cool your office.

(*)

By using Thin Clients within Praim and choosing to use only energy from renewable sources, in 2020 we avoided emitting 27.4313 tons of CO_2
